Welcome to DialogLink - Version 5 Revolutionize the Way You Work!

New on Dialog

Order Patent and Trademark File Histories Through Dialog

Thomson File Histories are now available directly through *Dialog*. Combined with the comprehensive patent and trademark information on *Dialog*, file histories give you the most complete view of a patent or trademark and its history in one place. When searching in the following patent and trademark databases, a link to an online order form is displayed in your search results, saving you time in obtaining the file histories you need.

Thomson File Histories are available from the following *Dialog* databases:

- CLAIMS/Current Patent Legal Status (File 123)
- CLAIMS/U.S. Patents (File 340)
- Chinese Patent Abstracts in English (File 344)
- Derwent Patents Citation Index (File 342)
- Derwent World Patents Index (for users in Japan) (File 352)
- Derwent World Patents Index First View (File 331)
- Derwent World Patents Index (File 351)
- Derwent World Patents Index (File 350)
- Ei EnCompassPat (File 353)
- European Patents Fulltext (File 348)
- French Patents (File 371)
- German Patents Fulltext (File 324)
- IMS Patent Focus (File 447, 947)
- INPADOC/Family and Legal Status (File 345)
- JAPIO - Patent Abstracts of Japan (File 347)
- LitAlert (File 670)
- U.S. Patents Fulltext (1971-1975) (File 652)

- U.S. Patents Fulltext (1976-present) (File 654)
- WIPO/PCT Patents Fulltext (File 349)
- TRADEMARKSCAN - U.S. Federal (File 226)

DialogLink 5 Release Notes

New features available in the latest release of DialogLink 5 (August 2006)

- Ability to resize images for easier incorporation into DialogLink Reports
- New settings allow users to be prompted to save Dialog search sessions in the format of their choice (Microsoft Word, RTF, PDF, HTML, or TEXT)
- Ability to set up Dialog Alerts by Chemical Structures and the addition of Index Chemicus as a structure searchable database
- Support for connections to STN Germany and STN Japan services

*** ANNOUNCEMENTS ***

"Thomson File Histories" are now available directly through Dialog in selected patent and trademark files. Combined with the comprehensive patent and trademark information on Dialog, file histories give you the most complete view of a patent or trademark and its history in one place. When searching in one of the patent and trademark databases, a link to an online order form is displayed in your search results, saving you time in obtaining the file histories you need. See HELP FILEHIST for more information about how to use the link and a list of files that contain the link.

The 2008 EMTREE Thesaurus has been added to EMBASE (Files 72, 73, 772, and 972)

INFOMINE - a model Web-based academic virtual library.

Mitchell, Steve; Mooney, Margaret

Information Technology and Libraries , v15 , n1 , p20(6)

March , 1996

Text:

INFOMINE is a World Wide Web virtual library which provides indexing, annotations and links to Internet resources of scholarly use to the academic community. Thousands of Internet resources covering most major disciplines are present. A custom HTML (Hyper-Text Markup Language, the language used to create Web documents) converter and database manager allow librarians with subject expertise but no HTML experience (or those with HTML knowledge but no time to maintain several HTML indexes) to contribute to and maintain INFOMINE in a time-efficient manner. INFOMINE was developed by the Library of the University of California, Riverside.

* Introduction and History

INFOMINE is a unique Web resource featuring well organized access to a substantial number of important research and educational tools on the Internet. INFOMINE is notable for its collection of close to five thousand annotated and indexed records with links to selected, university-level resources in most major academic disciplines. Information in INFOMINE is easy to find given the multiplicity of access points provided. It has received, on average, over twenty thousand accesses per week during the last fifteen months. In addition, INFOMINE provides simple and streamlined capabilities for adding resources (e.g., knowledge of HTML is not required) as well as essential maintenance functions (e.g., a URL Checker ensures that links are good). This article discusses INFOMINE as both a large Internet resource collection, commonly known as a "virtual" or "digital" library, and the custom hypertext database management system, with HTML converter, that has made the collection easy to build, maintain and use. INFOMINE (figure 1) can be accessed at <http://lib-www.ucr.edu>.

INFOMINE began over two years ago and was developed by the Library of the University of California, Riverside. It was one of the first Web-based, academic virtual libraries, as well as one of the first to develop a system combining the advantages of the hypertext and multimedia capabilities of the Web with the organizational and retrieval functions of a database manager.

Most of its important features and services, described in-depth below, remain unique among Internet resource collections.

* INFOMINE in Depth

The INFOMINE Collection

INFOMINE contains close to five thousand records. Among these are substantive databases, guides to the Internet and other electronic resources for most disciplines, textbooks, conference proceedings, and journals. The life sciences INFOMINE alone provides interactive access to nearly three hundred databases.

Separate virtual collections or INFOMINEs exist in most major areas of university-level research and educational interests. These include collections in: (a) Biological, Agricultural and Medical Resources; (b) Government Information Resources; (c) Social Sciences and Humanities (included here as well are General Reference, Business, Education, and

Library/Information Studies related resources); (d) Physical Sciences, Engineering, Computer Science and Mathematics; (e) Internet Enabling Tools (e.g., help, tutorials, navigators of assistance in Internet usage); (f) Maps and Geographic Information Systems; (g) Visual and Performing Arts; and, (h) Instructional Resources (in all disciplines) on the Internet. These are listed in order of comprehensiveness. The first two collections contain fifteen hundred and thirteen hundred resources respectively. The others are strong and compare favorably with collections at other large university systems surveyed. All files are growing rapidly, reflecting the growth of the Internet, and represent well-organized collections of selected, high-quality resources.

The INFOMINE System

INFOMINE for Users

Among the contributions of INFOMINE is the essential enrichment or

"value added" service, as mentioned, of providing annotations as well as in-depth indexing terminology for each record. This greatly helps faculty and students to quickly retrieve a focused results set, examine the relevance of individual records and then choose among them immediately prior to accessing thus saving considerable time.

In addition to providing search capabilities on conventional subject, keyword and title terms, INFOMINE allows retrieval on terms such as "comprehensive," "reference resources," "subject guides," "virtual libraries," and "searchable databases," among other terms, which indicate the depth and scope and/or pathfinding nature of specific resources. These qualities and others are often indicated, as well, in the annotation. Also emphasized is the inclusion of important subject guides to Internet, as well as to other electronic and print format resources in most major disciplines. Concerns regarding resource comprehensiveness, quality, and general usefulness from an academic perspective guide all INFOMINE resource selection activities.

INFOMINE provides a great number of access points, through both browse (What's New, Title, Table of Contents, Subject, Keyword, Title, hyperlinked indexing) (figure 2) and search (title, subject and keyword) (figure 3) modes. Search mode allows the user to quickly retrieve among the collection on the chosen subject(s). Nested, Boolean searching capabilities are featured. Search results come back in the form of dynamically created Web pages which are custom HTML documents created on the fly and containing the results set unique to each search (figure 4). By way of contrast, many conventional Web virtual libraries provide minimal searching and/or depend on displays of static lists of resources. In INFOMINE, each results set record, in addition, features indexing terms that are viewable and in hyperlink form and, when clicked upon, allow further broadening or narrowing of the search as desired (figure

Noteworthy for those browsing is the Table of Contents (figure 6). In this, all subjects are listed with the titles of all resources on a subject filing under the given subject term. For those who know which resource they want to use, clicking on the title will open it up for use. For those needing a little more information, clicking on a subject will bring up the title plus annotation for all resources listed under that subject.

In-depth description and indexing, careful selection, a considerable

number of options in browsing/searching (access points), and ample help within INFOMINE combine to assist the academic community in discovering and using important Internet tools.

INFOMINE for Indexers--Content Development and HTML Document Creation Made Easy

Several features and tools for resource description and indexing make INFOMINE attractive among those contributing to the building of the files. They combine to make INFOMINE records easy to add, edit, and maintain. Adding URLs (uniform resource locators or resource addresses), titles, subjects, keywords and annotations is simple and straightforward. Often, within the Windows or Linux environments (among others), adding a record is simply a matter of cutting and pasting.

It is crucial to note that in adding or editing, one does not need to know HTML. All new records are converted into this format automatically, when they are displayed, by INFOMINE. As a result, participants with subject knowledge, but no HTML experience, need not be challenged to learn yet another system perceived as complicated.

Moreover, from our central adder document (figure 7), data entered for each record is automatically converted to HTML in each of six dynamically created INFOMINE HTML documents at the time these documents are requested for viewing (i.e., the search results set as well as the following indexes: Titles, Subjects, Keywords, Table of Contents, Date-What's New, and, soon, Author). By way of contrast, in virtual libraries or subject guides made up of static HTML resource lists/documents, data representing each individual record would have to be manually entered in each of the separate HTML indexing documents. INFOMINE's ability to allow the adding of record data into one document and have this data then be automatically expressed in several HTML documents (again, results set pages and indexes) saves substantial amounts of time that would otherwise go into manual HTML work. For this reason, INFOMINE has provided a time-efficient means of building a substantial virtual library for both those with and without significant HTML experience.

Another helpful feature that is indispensable in maintaining large collections of links is a program that will automatically check and flag, at specified intervals, resources which have changed locations. INFOMINE's URL Checker does just this. It is important to note in this regard, for

example, that 5 percent of the resources in the life sciences component of INFOMINE have moved over the last ten-month period checked (the majority of these, though, have simply moved to a slightly different place on the same server, thus making them easy to relocate). In addition, a slight variant of the URL Checker has been employed to ensure that the resource to be added is not a duplicate (important with the current size of most of the files).

As INFOMINE has grown, various paths for future development have presented themselves. For instance, we have started exploring the development of networks of cooperating selectors/indexers not only at UCR but at other UC campuses as well. INFOMINE presents significant opportunities for efficient, multi-campus, shared Internet resource collection. Such efforts would result in a significant reduction in

redundant collecting efforts at each individual campus. An informal pilot project finished during the summer of 1995 has been successful at outlining many of the issues and concerns that would be a part of such a project. We are also examining the need for more uniform indexing languages for the various INFOMINES. To this end, we have begun using Library of Congress Subject Headings. In addition, shared indexing terminology among INFOMINES already exists, providing conventions and protocols for describing document types and approaches to geographic descriptors. Another ongoing project includes the modification of the INFOMINE management system so that both the data files and management programs could be distributed to participating campuses/organizations.

INFOMINE System Technical Details Summary

- * The INFOMINE Web server is a 90 MHz Pentium running Apache (httpd server, v. 1.0) on Linux (kernel v. 1.3.45), a form of the UNIX operating system for PCs. Apache and Linux were chosen because of their price (free) and performance. Linux is now believed to be the best operating system, given its overall performance, for the i386 architecture family of PCs (386, 486 and pentium machines).

- * INFOMINE, though optimized for the current version of Netscape, can be accessed by all popular Web browsers.

- * INFOMINE uses mSQL (mini SQL), v. 1.0.10, as a database management system/server to facilitate indexing and the storage/retrieval of records. This standard SQL-based system will allow INFOMINE to grow substantially in the future. mSQL is known to compile on many popular UNIX systems, such as Solaris and SunOS, OSF/1, among others.

- * INFOMINE could be served from very powerful, high-performance workstations when the need for greater performance presents itself.

- * INFOMINE utilizes the C++ programming language for all user-interface functions (e.g., searching, displaying the table of contents, adding/editing resources, etc.). The PERL programming language and C++ are used for INFOMINE system maintenance functions/programs.

- * For INFOMINE contributors, a Web forms-based record adder/editor is provided which allows easy adding/editing/deleting of multiple HTML documents as appropriate. In adding and editing, INFOMINE features a built-in automatic HTML conversion feature which eliminates the need for contributors to acquire HTML skills or make additions/changes from more than one HTML document (attractive to those with HTML experience).

- * Easy, efficient maintenance of a large digital library depends on having an automatic way of checking on the working "linkability" of the records included. INFOMINE provides this in the form of its URL Checker. This checks for and then flags records with links that will not open for later annual verification by databases editors.

* Conclusion and Project Personnel

It is important to note in ending that many of us who directly provide Internet access to faculty and students have found that expectations for robotic and other Internet navigational or finding tools which provide very minimal human input have not been met. In comparison, the INFOMINE virtual library is an efficient and academically focused organizing tool which joins the vast, traditional experience of our profession in organizing information with the Internet in order to help create intelligent order among and access to high-quality, well-selected, and annotated electronic resources.

The INFOMINE project development team consists of Steve Mitchell (UCR Sciences Librarian and INFOMINE Co-

Coordinator;

smitch@ucrcl.ucr.edu); Margaret Mooney (UCR Librarian, Head of the Government Publications Department, INFOMINE Co-Coordinator;

mmooney@ucrcl.ucr.edu); Carlos Rodriguez (UCR Sciences Librarian, INFOMINE Graphics/HTML Coordinator and Physical Sciences Resources

Facilitator); George Daswani (Programmer/Systems Analyst, UCR Library).

Musselman, Faye

HFN The Weekly Newspaper for the Home Furnishing Network , p 14(1)

Nov 9 , 1998

Text:

DALLAS—There's an evolution going on in kiddieland. Bunnies and bears and pastel colors still have their place, especially in the mass channel of distribution, but for many exhibitors showing at the Juvenile Products Manufacturers Association show, their lines aimed at the mid-tier to upper-end channels frequented by boomer parents and grandparents increasingly were influenced by trends in the adult home textiles market.

The expo ended its four-day run Oct. 28 at the Dallas International Apparel Mart.

At the Gerber Childrenswear showroom, which was doubled in size from last year's show -- Gerber's design consultant Bonni Weisman said, "The nursery used to be the forgotten child, but now parents want it to match the flavor of the house."

In a market where four-piece crib ensembles range from \$200 to \$850, executives noted that consumers often coordinate baby's room with the nanny's. Grandparents furnish their own nursery, which doubles as a guest room or matches the decor of adjoining rooms.

Claudette von Rusten, who owns three Cotton & Company specialty shops in the San Francisco Bay area, said the age of her typical customer is 38 to 48, and that they want contemporary styles in the nursery. "We're not a cutesy store," she said. "I never sell pink."

Many showrooms at JPMA showed neutral tones to match the popular wood tones of new cribs. Others, such as California Kids and My Dog Spot, reflected a marketwide saturation of color that included periwinkle, red and citrus greens, yellows and oranges. Imported fabrics, bold textures and finishes were everywhere.

The industry has "dared to push the envelope in the baby market that hasn't changed in 50 years," said Jean Kasem, chief executive of Little Miss Liberty, whose round cribs were dressed in everything from denim to doupioni silk, faux fur and pleather, a synthetic leather.

Other looks included denim and khaki from Baby Guess, denim and chambray at Gerber, seersucker at Red Calliope, Oxford cloth and hobnail corduroy at Summersault, and brushed cotton and ticking stripes at Cotton Tale. Many manufacturers also complemented their collections with jersey sheets and fleece blankets.

Vintage and country themes included Shabby Chic's washed prints and Amy Coe's mini-toile and red, white and blue Americana group. On the nostalgic front, Springs showed chenille, and NoJo offered a retro group with illustrations from the Dick and Jane first-grade reading books.

Patch Kraft, which introduced a six-piece Crib-in-a-Bag at the show, featured selections from the Tomi collection, in bold plaid, to Classique, a delicate embroidered pique.

On the more formal side, Beautiful Baby, a custom manufacturer that caters to specialty shops, offered tapestries, matelasse, voile and plisse

from a group of 40 suppliers that included Waverly and assorted European vendors. Pillowtex showed marblized sheeting and iridescent bedding.

As in adult furnishings, embellishment and handcrafted details added interest and sophistication. Liz Wain's handpainted selections included a Marimekko-like, flowered pique, as well as cowboys and clowns on 210- count Egyptian cotton woven in Italy.

In WestPoint Stevens' showroom, Designers Guild selections mixed printed, yarn dyed, appliqued and embroidered bedding. Patchwork was popular at Summersault, Gerber and at C & F, which also added hand-hooked rugs to its collections. Embroidery also helped generate traffic in blankets from Owen Mfg., as well as new bath products and accessories.

BUMPER CROP OF NEW GOODIES FOR '90S BABY

Arizona Republic (AR) - Wednesday, November 25, 1998

By: Liz Stevens, News-Sentinel (Fort Wayne, Ind.)

Edition: Final Chaser Section: Life Page: D4

Word Count: 805

Text:

DALLAS

- Parents of the world rejoice! Giving birth has never been easier. Well, maybe not the actual birthing part, but everything that comes afterward is a cinch - and lightweight, compact, safe, educational, convenient, fast and odor-resistant to boot. It's child rearing a la the 21st century, on its way to a baby boutique near you.

A mind-boggling expanse of consumer goodies for infants, toddlers, and moms and dads debuted recently at the 29th annual International Juvenile Products Show in Dallas - perhaps the only place to see businessmen pulling potty-training seats out of their briefcases.

Innovations, real and hyped, abounded inside the International Apparel

Mart, where retailers (a k a "buyers" in industry lingo) flocked to view the latest offerings from 340 kid-stuff companies. Most of the items will be introduced in stores within several months.

Of course, some people may dismiss Splat Shields, Baby-Coo-Shoes and Preemie Gift Sets as so much materialistic hooey, fobbed on self-conscious consumers by a capitalist conspiracy determined to make parents feel inadequate.

Then again, those Rattlin' Toes play socks were cute!

Oh, and how about the mountain gear-inspired baby jumper on the bungee cord? So very Everest! And wouldn't it be cruel to force a kid to eat off plain dinnerware when Todd Parr's zoo animals can make peas chic?

OK, so it was easy to get caught up in the everything-for-baby frenzy, even for the pre-parenthood attendee. Some of this stuff appeared truly revolutionary. Take the Bizzy Belt, a colorful gizmo with three Velcro straps, two for toy attachments and one for a bottle.

Avent, a company out of Illinois, thinks it has revolutionized the breast-feeding industry with its Isis breast pump, which looks a little like a Space Age air horn. No batteries, no electricity and "petal massagers" to stimulate milk flow. In the booth, the Isis is displayed like a crown jewel, surrounded by businesspeople intent on talking "suction."

A crib is a crib, right? Not so to Jean Kasem, significant other to Casey Kasem and baby entrepreneur. Kasem's Little Miss Liberty Round Crib Co. of Beverly Hills exceeds the everyday, to say the least. The booth's featured item, denoted by flashing red spotlights and a Harley-Davidson motorcycle parked crib-side, is the '70s Rock-N-Roll, an all-chrome baby bed with canopy.

Round cribs mimic the shape of the womb and aren't as scary to new dads, Kasem says, especially when the beds come in steel. Kasem describes her coordinating infant bedding line as breaking the mold when it comes to dust ruffles and comforters: "I'm more of a wildcatter." Next stop: strollers.

The Emmaljunga booth is akin to a Bentley showroom, with lots of shiny chrome "chassis" and hunter-green fabrics. The Emmaljungas, made in Sweden, look like fancy shopping carts with hoods and have names such as the Viking and the Jupiter. The company woos prospective clients into its lair with tavern games: score 62 points shooting a basketball through a bottomless bassinet and win free delivery!

Baby goes high tech with e-Stork, the kind of idea that makes the rest of us dullards smack our heads and whine, "Why didn't I think of that?" For \$40, Kathryn and David Besemer will whip up a Web page for your new arrival with a private Internet address to send to friends and family. Pick a design, fill out the stats and send the Besemers up to eight photos with captions. Within three days, you'll have an e-kid.

For a few bucks more, the Besemers will add a 30-second sound clip, a Ga-Ga Byte, and/or a 30-second video, er, "kideo."

The safety category runneth over with sun shields (for car seats, strollers and joggers) and fireplace cushions (to protect kids from brick and stone edges). The Door Mouse prevents toddlers from slamming doors on their fingers. The BuckleAlert!, an industry award winner, lets parents know each time a child buckles or unbuckles a seat belt.

A few fledgling manufacturers had no booths and worked the show like strolling minstrels. Michael Carr of Dallas, scanning the crowd for potential opportunities, nabbed this reporter with the promise of a breaking story. Carr then introduced said reporter to his wife, Laura.

From her black vinyl bag, Laura Carr pulled an entrepreneurial inspiration that was several years in the making. The TeePee Cover consists of a band of plastic the width of a toilet-paper roll that Velcros into place, adjusting to the size of the roll.

"My boys both liked to take wads of toilet paper and stuff it in their mouths," Carr says.

The item prevents tampering and retails for \$9.95 through the Perfectly Safe catalog.

It all begs the question: How did parents ever get by without this stuff?

DALLAS

- Parents of the world rejoice! Giving birth has never been easier. Well, maybe not the actual birthing part, but everything that comes afterward is a cinch -- lightweight, compact, safe, educational, convenient, fast and odor-resistant to boot. It's child rearing la the 21st century, on its way to a baby boutique near you.

A mind-boggling expanse of consumer goodies for infants, toddlers and moms and dads debuted recently at the 29th annual International Juvenile Products Show in Dallas -- perhaps the only place to see businessmen pulling potty-training seats out of their briefcases.

Innovations, real and hyped, abounded inside the International Apparel Mart, where retailers (a k a "buyers" in industry lingo) flocked to view the latest offerings from 340 kid-stuff companies. Most of the new items will be introduced in stores within several months.

Of course, some people might dismiss Splat Shields, Baby-Coo-Shoes and Preemie Gift Sets as so much materialistic hooey, fobbed on self-conscious consumers by a capitalist conspiracy determined to make parents feel inadequate.

Then again, those Rattlin' Toes play socks were soooooo cute!

Oh, and how about the mountain-gear-inspired baby jumper on the bungee cord? So very Everest! Plus, wouldn't it be cruel to force a kid to eat off plain dinnerware when Todd Parr's zoo animals can make mashed peas chic?

Some of this stuff appeared truly revolutionary. Take the Bizzy Belt, a colorful gizmo with three Velcro straps, two for toy attachments and one for a bottle. The belt aims to prevent Junior from chucking his pacifier into Grandma's soup.

Avent, a company out of Illinois, thinks it has revolutionized the breast-feeding industry with its Isis breast pump, which looks a little like a space-age air horn. No batteries, no electricity and "petal massagers" to stimulate milk flow.

A crib is a crib is a crib, right? Not so to Jean Kasem, whose Little Miss Liberty Round Crib Co. of Beverly Hills exceeds the everyday, to say the least. The booth's featured item, denoted

by flashing red spotlights and a Harley-Davidson motorcycle parked cribside, is the '70s Rock-N-Roll, an all-chrome baby bed with canopy.

Round cribs mimic the shape of the womb and aren't as scary to new dads, Kasem says, especially when the beds come in steel. Kasem describes her coordinating infant bedding line as breaking the mold when it comes to dust ruffles and comforters: "I'm more of a wildcatter."

Next stop: strollers.

The Emmaljunga booth is akin to a Bentley showroom, with lots of shiny chrome "chassis" and hunter-green fabrics. The Emmaljungas, made in Sweden, look like fancy shopping carts with hoods and have names such as the Viking and the Jupiter.

The safety category runneth over with sun shields (for car seats, strollers and joggers) and fireplace cushions (to protect kids from brick and stone edges). The Door Mouse prevents toddlers from slamming doors on their fingers. The BuckleAlert!, an industry award winner, lets parents know each time a child buckles or unbuckles her seat belt.

A few fledgling manufacturers had no booths and worked the show like strolling minstrels. Dallasite Michael Carr, scanning the crowd for potential opportunities, nabbed this reporter with the promise of a breaking story. Carr then introduced said reporter to his wife, Laura.

From her black vinyl bag, Laura Carr pulled an entrepreneurial inspiration that was several years in the making. The TeePee Cover consists of a band of plastic the width of a toilet paper roll that Velcros into place, adjusting to the size of the roll.

"My boys both liked to take wads of toilet paper and stuff it in their mouths," Laura Carr explains. The TeePee Cover basically prevents toilet-paper tampering, and retails for \$9.95 through the Perfectly Safe catalog.

It all begs the question: How did parents ever get by without this stuff?
